

The first and only acoustically designed kick drum dampener.

- Consistently great kick drum sound.
- Easy to reposition for different sounds.
- Predictable results on nearly any kick with nearly any microphone.
- No fiberglass or foam / uses safe "Green" core materials (recycled cotton).
- Standard sizes (14", 16", & 18" lengths).
- Affordable – street price \$50.
- Works well with inexpensive heads (pays for itself).

The **Kik Brik™** is an innovative new product for drummers, recording engineers, and live-sound engineers searching for consistently great-sounding kick drums.

It's design* is based on acoustical science and 30 years experience in recording and drumming. The Kik Brik™ is a physical drumhead dampener, and also an acoustic dampener, absorbing unwanted overtones (harmonic ringing) across a broad frequency bandwidth. Uniquely shaped ends dampen one or both heads for the perfect sound.

The core of the Kik Brik™ is formed from specially manufactured high-density multi-layered recycled cotton, which has linear sound absorption similar to compressed

acoustic fiberglass, and is much more effective than acoustic foam. This material "treats" the inside of the drum like an acoustician would treat a recording studio to eliminate unwanted reflections and resonances. The Kik Brik™ greatly improves the drum's sound while its sonic "signature" remains intact.

The Kik Brik™ is covered with tough, acoustically transparent poly mesh for durability. Each end has a different double-bevel shape for changing drumhead contact points. Velcro strips (included) hold the "Brik" in place, with easy repositioning.

Great kick sound – simple as a Brik.
